Report Number: NGC 5014098

Test Method: This test method conforms explicitly with the American Society for Testing and Materials Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements - Designation: E 90 - 04 / E 413 - 10.

Specimen Description: 6 inch concrete slab floor- suspended ceiling assembly overlaid with, according to client, Hardwood Flooring on ECO Cork Foam underlayment.

The test specimen was a floor-suspended ceiling assembly and was observed to consist of the following:
All weights and dimension are averaged:

- 1 layer of, according to client, Hardwood Flooring. The hardwood flooring was adhered to the underlayment with Roberts 1407 acrylic adhesive using a 6.35 mm x 6.35 mm x 6.35 mm (1/4 in. x 1/4 in. x 1/4 in.) V-notch trowel. Observed dimensions: Random length planks. Measured thickness: 18.67 mm (0.735 in.) Measured weight: 13.96 kg/m² (2.86 PSF)
- 1 layer of, according to the client, ECO Cork Foam underlayment. The underlayment seams were butted and taped together, and was adhered to the concrete slab with Roberts 1407 acrylic adhesive using a 6.35 mm x 6.35 mm x 6.35 mm (1/4 in. x 1/4 in. x 1/4 in.) V-notch trowel. Measured thickness: 3.25 mm (0.1280 in.) Measured weight: 0.40 kg/m² (0.08 PSF)
- 152.4 mm (6 in.) thick reinforced concrete slab, weighing: 366.2 kg/m² (75.0 PSF)
- 1 layer of, 88.9 mm (3.5 in.) unfaced fiberglass batt insulation which was laid over the suspended grid system parallel to the main tees. Sample weight: 0.78 kg/m² (0.16 PSF)
- Gypsum wallboard ceiling grid suspension system. System is comprised of main tees and cross tees. The main tees were placed 1219.2 mm (48 in.) o.c. and the cross tees were placed 609.6 mm (24 in.) o.c. 16 gauge galvanized tie wire was used to attach the main tees to concrete anchors, located 1219.2 mm (48 in.) o.c. along the longitudinal axis, suspending the grid 304.8 mm (12 in.) below the concrete slab.
- 1 layer of, 15.9 mm (5/8 in.) Type X gypsum wallboard. The wallboard was attached parallel to the suspended grid suspension system mains, using 28.6 mm (1-1/8 in.) Type S drywall screws spaced 304.8 mm (12 in.) o.c. The wallboard joints were taped. Suspended gypsum wallboard grid ceiling weighted: 11.23 kg/m² (2.3 PSF)

The overall weight of the test assembly: 392.51 kg/m² (80.40 PSF)

The perimeter of the test frame was sealed with a rubber gasket and a sand filled trough.
The test frame was structurally isolated from the receiving room.

Specimen size: 3657.6 mm x 4876.8 mm (12 ft. x 16 ft.)

Conditioning: Concrete slab cured for a minimum of 28 days. Adhesive cured a minimum of 24 hours.

Test Results: The results of the tests are given on pages 4 and 5 of the report.

The results reported above apply to specific samples submitted for measurement. No responsibility is assumed for performance of any other specimen. The laboratory's accreditation or any of its test reports in no way constitute or imply product certification, approval, or endorsement by NVLAP or any agent of the U.S. Government. This report may not be reproduced except in full, without written approval of the laboratory.
